

RECONSTRUCTED ARGIL SURFACES

Argil is a naturally tactile product. A trowelled coating, pleasant to the touch, applied in two coats, created by blending natural elements. Easily spread onto surfaces, it transforms the action of human hands into a decorative effect.

It is a solvent free, eco friendly material. Developed for indoor use to coat furnishings in private and public locations with excellent mechanical properties.

APPEARANCE

A trowelled coating with a varying appearance achieved through the application method.

The final result is a surface with an irregular effect both in look and thickness, velvety to the touch and pleasantly porous.

COMPOSITION

Blend of clay, vegetable cellulose fibre, natural lime, micronised powdered marble, coloured earths and oxides.
